Regarding Review of Reports on Emergency Safety Measures

Although these errors are mainly caused by misreading of dimensions from equipment drawings and are unlikely to affect the assessment results and the measures taken by the operators pursuant to the direction, NISA has decided to instruct all the nuclear operators, who were given the direction, to investigate if errors exist in their reports on emergency safety measures, because these errors themselves may lead to lowering the reliability of the assessment results.

Attachment 1: Summary of Reports on Errors from Operators and Effects on Assessment
Attachment 2: Regarding Review of Reports on Emergency Safety Measures (Direction)
