**Conditions of Fukushima Dai-ichi Nuclear Power Station Unit 1**

(As of 12:00 June 25, 2011)

**Major Events after the Earthquake 1/3**

- March 11 14:46: Under operation, Automatic shutdown by the earthquake
- March 11 15:42: Report based on the Article 10 (Total loss of A/C power)
- March 11 16:36: Occurrence of the Article 15 event (Inability of water injection of the Emergency Core Cooling System)
- March 12 01:20: Occurrence of the Article 15 event (Unusual rise of the pressure in PCV)
- March 12 10:17: Started to vent.
- March 12 15:36: Sound of explosion
- March 12 20:20: Started to inject seawater and borated water to the Reactor Core.
- March 23:2:3: The amount of injected water to the Reactor Core was increased utilizing the Feedwater Line in addition to the Fire Extinguish Line.
- March 24 11:30: Lighting in the main Control Room was recovered.
- March 25 15:37: Started to inject fresh water.
- March 29 08:32: Switched to the water injection to the Reactor Core using the temporary motor-driven pump.
- March 31 12:00:~2nd 15:26: Started to transfer the accumulated water from the Condensate Storage Tank (CST) to the Surge Tank of Suppression Pool Water (SPT)
- April 3 12:02: The power supply to the temporary motor-driven pump was switched from the temporary power supply to the external power supply.
- April 3 13:55: Started to transfer the water from the Condenser to CST.
- April 6 22:30: Started the operation for the injection of nitrogen to PCV.
- April 7 01:31: Confirmed starting the injection of nitrogen to PCV.
- April 9 04:10: Started using highly pure nitrogen generator in the injection of nitrogen to PCV.
- April 10 09:30: Completed transferring the water from the Condenser to CST.
- April 11 around 17:16: Loss of external power supply due to an earthquake occurred (at Hamadori in Fukushima Prefecture) and water injection to the Reactor Core and nitrogen injection to PCV were suspended.
- April 11 17:56: External power supply was recovered.
- April 11 18:04: Resumed injecting water to the Reactor Core.
- April 11 23:34: Confirmed starting injection of nitrogen to PCV.
- April 17 16:00~17:30: Confirmed the situation in the reactor building using an unmanned robot.
- April 18 11:50~12:12: Stopped the water injection into the reactor core to replace the current hose with a new one.
- April 19 10:23: Completed the work of strengthening connection of the power supplies between Units 1-2 and Units 3-4.
- April 25 10:57~18:25: For reinforcement work of the power supply, the power supply to the pump injecting water into the reactor core was temporarily switched from the external power supply to the temporary diesel generator.
- April 25 14:10~19:10: Suspended nitrogen injection due to reinforcement work of the power supply.
- April 25 14:44~17:38: Implemented reinforcement work of the power supply (connection of the power supplies between Units 1-2 and Units 3-4).
- April 26 11:35~13:24(approx.): Confirmed the situation in the reactor building using an unmanned robot.

**Current Conditions : Fresh water is being injected to the Spent Fuel Pool and the Reactor Core**

(Editorial committee for Nuclear Energy Handbook, Nuclear Energy Handbook)
Major Events after the Earthquake 2/3

April 27 10:02 Started the operation of gradually changing the amount of water for injection to the Reactor Pressure Vessel, (RPV) from about 6m³/h to the maximum of about 14m³/h. After carrying out the injection at 10m³/h, the injection rate was changed back to 6m³/h. (April 29 10:14)

April 29 11:36~14:05 Confirmed the situation in the reactor building using an unmanned robot.

May 2 12:58~15:03 The pump for the injection of water into the reactor core was temporarily replaced with the Fire Extinguishing Pump in order to install an alarm device in the pump.

May 5 16:36~May 8 20:02 Operated all ambient filtration systems (a total of 6 units) in order to improve the working environment in the reactor building.

May 6 10:01 Changed the rate of water injection into the Reactor Core from 6m³/h to 8m³/h.

May 8 20:08 Ventilation by cutting of the exhaust air duct

May 9 05:10 Disassembly of positive pressure house

May 11 08:47~15:55 Due to the restoration of the Okuma No.2 transmission line, the power supply for the water injection pump into the reactor was temporarily switched to the temporary diesel generator.

May 11 08:50~15:58 Due to the restoration of the Okuma No.2 transmission line, the nitrogen injection was temporarily suspended.

May 12 16:01~17:39 Confirmed the reactor water level of RPV, calibrated reactor pressure gauge of primary containment vessel.

May 14 16:01~17:07 Water spray over the Spent Fuel Pool by Concrete Pump Truck (stopped due to strong winds)

May 15 13:28 Changed the rate of water injection into the Reactor Core from 8m³/h to 10m³/h.

May 17 11:50 Changed the rate of water injection into the Reactor Core from 10m³/h to 6 m³/h.

May 20 09:30~12:15 Entered in the reactor building, confirmed reactor water level and radioactivity.

May 25 09:14~9:18 Nitrogen injection to PCV were suspended for changing power supply.

May 25 15:16~15:18 Nitrogen injection to PCV were suspended for changing power supply.

May 25 15:45 Confirmed that the compressor for nitrogen supplying was stopped. 19:44 Restart the nitrogen injection after changing to the reserve compressor.

May 27 10:30~around 12:00 and around 15:00 Entered in the reactor building, Installed the level gauge of reactor building accumulated water, Sampled basement accumulated water, and Installed hoses for SFP.

May 28 16:47~17:00 Leak test in order to inject fresh water to SFP via FPC

May 31 20:30 Changed the rate of water injection into the Reactor Core from 6m³/h to 5m³/h.

June 3 10:38~12:21 Installed temporary pressure gauges for the reactor.

June 3 around 15:00~around 17:00 Confirmed the situation in the reactor building using an unmanned robot.

June 4 9:57~13:56 Suspended the injection of coolant water due to the work for changing the route of water supply line to the reactor core. (10:02~13:43 Injected water into the reactor core by the fire engine pump.)

June 8 14:57~17:54 Suspended the nitrogen injection due to the stop of the power center 2C.

June 13 14:58~17:43 Transfer the accumulated water from the Condenser to the basement of turbine building.

June 14 14:09 Replaced the pump for the injection of water into the reactor core with the Fire Extinguishing Pump.

June 14 15:35~15:50 Suspended water injection to replace the hose of water injection into the reactor.

June 15 10:06 The amount of water injection into the reactor was changed from about 5m³/h to about 4.5m³/h.

June 15 10:33~June 16 9:52 Transferred the accumulated water from the Condenser to the CST.
June 19 10:35~15:47 Due to preparation for the suspension works of the Okuma No.2 transmission line, the power supply for the water injection pump into the reactor core was temporarily switched to the diesel generator.

June 19 11:48~16:05 Due to preparation for the suspension works of the Okuma No.2 transmission line, the nitrogen injection was temporarily suspended.

June 21 10:02 The amount of water injection into the reactor was changed from about 4.5m³/h to about 4.0m³/h.

June 21 11:55~18:03 The nitrogen injection was temporarily suspended due to the installation work of a temporary transformer.

June 22 10:02 The amount of water injection into the reactor was changed from about 4.0m³/h to about 3.5m³/h.

June 23 18:27 Water injection into the reactor core of Units 1 and 2 was begun, using the water injection pump into the reactor core for Unit 1.

March 31 13:03~16:04, May 20 15:06~16:15, May 22 15:33~17:09

May 29 11:10~15:35, June 5 10:16~10:48
Spent Fuel Pool Cooling System

- **Spent Fuel Pool Water Temperature**: 34°C
- **PCV*3 Pressure**: 0.005MPa
  - **Condition**: Almost no change

Reactor Pressure A: 0.110MPa*
Reactor Pressure B: ~MPa*
*Readings of temporary gauges were converted to absolute pressure, and represented in A from 20:00 June 24.

**Condition**: Almost no change
*converted to absolute pressure

**Reactor Water Level A**: -1,750mm
(under monitoring of the change of the situation)
**Reactor Water Level B**: -2,150mm
(under monitoring of the change of the situation)
**Condition**: Uncovering of the core from the top of the active fuel to the levels described above

**PCV Pressure**: 0.005MPa
*3 Primary Containment Vessel
**Temperature**: 59.0°C
**S/P*4 Water Temperature A**: 59.0°C
**S/P*4 Water Temperature B**: 59.1°C
*4 Suppression Pool
**Condition**: Almost no change
**S/P*4 Pressure Off scale** (indicator failure)

- **S/P*4 Water Temperature B**: 59.1°C
- **S/P*4 Water Temperature A**: 59.0°C
- **Condition**: Almost no change

**EDG*2**
- Power supply vehicle, Temporary DGs
- Injecting freshwater by temporary motor-driven pump

**RHRS *1**
- Residual Heat Removal System
- 109.1°C
- Primary Containment Vessel

**Current Conditions**: Fresh water is being injected to the Spent Fuel Pool and the Reactor Core

**External Power**
- Two lines secured

**Spray water by temporary motor-driven pump through existing cooling system**

**Possible damage of the suppression chamber**

**Major Events after the Earthquake 1/3**

- **March 11 14:46**: Under operation, Automatic shutdown by the earthquake
- **March 11 15:42**: Report based on the Article 10 (Total loss of A/C power)
- **March 11 16:36**: Occurrence of the Article 15 event (Inability of water injection of the Emergency Core Cooling System)
- **March 13 11:00**: Started to vent.
- **March 13 13:25**: Occurrence of the Article 15 event (Loss of reactor cooling functions)
- **March 13 13:44**: Started to inject seawater to the Reactor Core.
- **March 14 22:50**: Occurrence of the Article 15 event (Unusual rise of the pressure in PCV)
- **March 14 00:02**: Started to vent.
- **March 15 06:10**: Sound of explosion
- **March 15 around 06:20**: Possible damage of the suppression chamber
- **March 19 15:46**: Power Center received electricity.
- **March 21 18:22**: White smoke generated. The smoke died down and almost invisible at 07:11 March 22
- **March 26 10:10**: Started to inject fresh water to the Reactor Core.
- **March 26 14:66**: Lighting in the Central Control Room was recovered.
- **March 27 18:31**: Switched to the water injection to the core using the temporary motor-driven pump.
- **March 29 16:45**: Transferred the water from the Condensate Storage Tank (CST) to the Surge Tank of Suppression Pool Water (SPT)
- **April 2 around 9:30**: The water, of which the dose rate was at the level of more than 1,000mSv/h, was confirmed to be collected in the pit located near the Intake Channel of Unit 2. The outflow from the lateral surface of the pit into the sea was also confirmed.
- **April 2 17:10**: Started to transfer the water from the Condenser to the CST.
- **April 3 12:12**: The power supply to the temporary motor-driven pump was switched from the temporary power supply to the external power supply.
- **April 3 13:47**: The water outflow from the lateral surface of the pit was confirmed to stop.
- **April 3 14:30**: 20 bags of sawdust, 80 bags of high polymer absorbent and 3 bags of cutting-processed newspaper were put into the Pit for the Conduit.
- **April 4 07:08**: Approximately 13kg of tracer (bath agent) was put in from the Pit for the Duct for Seawater Pipe.
- **April 5 14:15**: Tracer is confirmed to be collected at the permeable layer around the pit into the sea.
- **April 5 15:07**: Started to inject coagulant.
- **April 6 14:50**: The water outflow from the lateral surface of the pit was confirmed to stop.
- **April 9 13:10**: Completed transferring the water from the Condenser to CST.
- **April 11 17:16**: Loss of external power supply due to an earthquake occurred (at Hamadori in Fukushima Prefecture). Water injection to the Reactor Core was suspended.
- **April 11 17:56**: External power supply was recovered.
- **April 11 18:04**: Resumed injecting water to the Reactor Core.
- **April 11 19:35**
  - **April 13 17:04**: Transfer accumulated water from the trench of the turbine building to the Condenser.
- **April 13 11:00**: Suspended the transfer for checking leaks, etc.
- **April 16 around 11:19**: An earthquake occurred (in the southern part of Ibaraki Prefecture).
- **April 18 13:42**: Confirmed the situation in the reactor building using an unmanned robot.
- **April 18 12:13**
  - **12:37**: Started to transfer the water injection into the reactor core by replacing the current hose with a new one.
- **April 18 09:30**
  - **17:40**: Injected coagulant (soluble glass) into the power cable trench.
- **April 19 08:00**
  - **15:30**: Injected coagulant (soluble glass) into the power cable trench.
- **April 19 10:08**
  - **10:18**: Started to transfer the accumulated water from the trench of the turbine building to the Radioactive Waste Treatment Facility.
- **April 19 10:23**: Completed the work of strengthening connection of the power supplies between Units 1-2 and Units 3-4.
April 25 10:57～18:25 For reinforcement work of the power supply, the power supply to the pump injecting water into the reactor core was temporarily switched from the external power supply to the temporary diesel generator.
April 25 14:44～17:38 Implemented reinforcement work of the power supply (connection of the power supplies between Units 1-2 and Units 5-6).
April 29 9:16 Suspended the transfer of accumulated water from the turbine building Trench of Unit 2 (accumulated water with high-level radioactivity) to the Radioactive Waste Treatment Facility in order to carry out inspections, etc. of the transfer facilities. The transfer was resumed. (From 14:05 April 30th)
May 1 13:35～ Started blocking the vertical shafts of Trench pit.
May 2 12:58～15:03 The pump for the injection of water into the reactor core was temporarily replaced with the Fire Extinguishing Pump in order to install an alarm device in the pump.
May 7 9:22 Suspended the transfer of accumulated water from the turbine building Trench of Unit 2 (accumulated water with high-level radioactivity) to the Radioactive Waste Treatment Facility in order to carry out piping work of Reactor Feedwater System for Unit3. The transfer was resumed. (From 16:02 May 7th)
May 10 9:01～May 12 15:20 Suspended the transfer of accumulated water from the turbine building Trench of Unit 2 (accumulated water with high-level radioactivity) to the Radioactive Waste Treatment Facility in order to lay the water transfer pipes from the turbine building of Unit 3 to the Radioactive Waste Treatment Facility.
May 11 8:47～15:55 Due to the restoration of the Okuma No.2 transmission line, the power supply for the water injection pump into the reactor was temporarily switched to the temporary diesel generator. (After the restoration, the power supply is partially received from this line.)
May 26 14:45～May 27 14:30 Transferred the water from the Condenser to the basement of the turbine building in order to carry out piping work of Reactor Feedwater System.
May 26 16:01 Suspended the transfer of accumulated from the turbine building Trench to the Radioactive Waste Treatment Facility. (Because the water level of the concerned facility was close to the first basement level.)
May 29 11:33 Started to inject water to the Reactor Core via Feedwater line in addition to Fire Extinguish line
May 30 11:15 Conducted a leakage test on the secondary system of the alternative cooling system for the Spent Fuel Pool. A trial run of the secondary system was started at 15:02.
May 30 18:05 Stopped injecting water to the Reactor Core via Fire Extinguish line.
May 31 11:40 Conducted a leakage test on the primary system of the alternative cooling system for the Spent Fuel Pool.
May 31 17:21 Started full-fledged operation of the alternative cooling system for the Spent Fuel Pool.
June 3 13:49～14:09 Suspended the injection of coolant water due to the work for changing the route of water supply line to the reactor core.
June 3 18:39～June 4 12:28 Transferred the accumulated water from the trench of the turbine building to the condenser.
June 4 18:39～June 16 8:40 Transferred the accumulated water from the turbine building trench to the Radioactive Waste Treatment Facility.
June 8 15:40 ～18:03 Suspended the transfer of accumulated water from the turbine building trench to the Radioactive Waste Treatment Facility due to the stop of the power center 2C.
June 11 11:45 ～12:19 Conducted a test run of the ambient air filtration system of the reactor building.
June 14 12:14～12:37 Suspended water injection to replace the hose of water injection into the reactor.
June 17 14:20～14:59 Transferred accumulated water from the turbine building trench to the condenser of Unit 1 (suspended due to a malfunction of the pump).
June 19 10:49～15:35 Due to preparation for the suspension works of the Okuma No.2 transmission line, the power supply for the water injection pump into the reactor core was temporarily switched to the diesel generator.

June 19 11:03～16:00 Due to preparation for the suspension works of the Okuma No.2 transmission line, the alternative cooling system for the Spent Fuel Pool was temporarily suspended.

June 19 12:12～16:02 Due to preparation for the suspension works of the Okuma No.2 transmission line, the local exhauster was temporarily suspended.

June 19 20:51～The double door of the reactor building was slightly opened. June 20th The double door was fully opened from 5:00.

June 20 13:37～Started to transfer accumulated water from the turbine building trench to the condenser of Unit 1.

June 20 14:30 Opened the truck bay door of the reactor building.

June 21 10:04 The amount of water injection into the reactor was changed from about 5.0m³/h to about 4.5m³/h.

June 21 13:15～13:25 Preliminary survey was conducted inside of the reactor building.

June 22 9:56 Started to transfer accumulated water from the turbine building trench to the Radioactive Waste Treatment Facility.

June 22 10:04 The amount of water injection into the reactor was changed from about 4.5m³/h to about 4.0m³/h.

June 23 10:36～12:36 Installation works of temporary pressure gauges for the reactor was conducted.

June 23 18:27 Water injection into the reactor core of Units 1 and 2 was begun, using the water injection pump into the reactor core for Unit 1.

June 24 around 6:58 An unmanned helicopter that was collecting dust coming out of the opening of the reactor building made an emergency landing on the rooftop of the building.

<Sea water injection to SFP via FPC (using the fire engine pump)>

March 20 around 15:05～around 17:20, March 22nd 16:07～17:01, March 25 10:30～12:19 Started injection

<Fresh water injection to SFP via FPC (using the temporary motor-driven pump)>

March 29 16:30～18:25, March 30 09:25～23:50 *Including interruption by pump malfunction and damage to the hose, April 1 14:56～17:05, April 4 11:05～13:37, April 7 13:29～14:34, April 10 10:37～12:38, April 13 13:15～14:55, April 16 10:13～11:54, April 19 16:08～17:28, April 22 15:55～17:40, April 25 10:12～11:18, April 28 10:15～11:28, May 2 10:05～11:40, May 6 09:36～11:16, May 10 13:09～14:45(13:19～14:35 Hydrazine was also injected), May 14 13:00～14:37(13:08～14:02 Hydrazine was also injected), May 18 13:10～14:40(13:15～14:30 Hydrazine was also injected), May 22 13:02～14:40(13:04～14:03 Hydrazine was also injected), May 26 10:06～11:36(10:10～11:10 Hydrazine was also injected), May 30 12:06～13:52
Conditions of Fukushima Dai-ichi Nuclear Power Station Unit 3
(As of 12:00 June 25, 2011)

Spent Fuel Pool Cooling System

- Spent Fuel Water Temperature: 62 °C
- Measured during sampling measurement on May 8th

External Power
- Two lines secured
- EDG *2
  - Power supply vehicle, Temporary DGs
- RHRS*1
  - Injecting freshwater by temporary motor-driven pump

Current Conditions: Fresh water is being injected to the Spent Fuel Pool and the Reactor Core

- S/P*4 Water Temperature A: 47.2 °C
- S/P*4 Water Temperature B: 47.3 °C
- Condition: Almost no change

Major Events after the Earthquake 1/3

- March 11 14:46 Under operation, Automatic shutdown by the earthquake
- March 11 15:42 Report based on the Article 10 (Total loss of A/C power)
- March 13 05:10 Occurrence of the Article 15 event (Inability of water injection of the Emergency Core Cooling System)
- March 13 08:41 Started to vent.
- March 13 13:12 Started to inject seawater and borated water to the Reactor Core.
- March 14 05:20 Started to vent.
- March 14 07:44 Occurrence of the Article 15 event (Unusual rise of the pressure in PCV)
- March 14 11:01 Sound of explosion
- March 16 around 08:30 White smoke generated.
- March 17 09:45~10:01 Water discharge by the helicopters of Self-Defense Force
- March 17 19:05~19:15 Water spray from the ground by High pressure water-cannon trucks of Police
- March 17 19:35~20:09 Water spray from the ground by fire engines of Self-Defense Force
- March 18 before 14:00~14:38 Water spray from the ground by 6 fire engines of Self-Defense Force
- March 18 ~14:45 Water spray from the ground by a fire engine of the US Military
- March 19 00:30~01:10 Water spray by Hyper Rescue Unit of Tokyo Fire Department
- March 19 14:10~20:03:40 Water spray by Hyper Rescue Unit of Tokyo Fire Department
- March 20 11:00 Pressure of PCV rose(320kPa), Afterward fell.
- March 20 21:36~21:39 Water spray by Hyper Rescue Unit of Tokyo Fire Department
- March 21 around 15:55 Grayish smoke generated and was confirmed to be died down at 17:55.
- March 22 15:10~16:00 Water spray by Hyper Rescue Unit of Tokyo Fire Department and Osaka City Fire Bureau.
- March 22 22:46 Lighting in the Central Control Room was recovered.
- March 23 11:03~13:20 Injection of about 35 ton of sea water to the Spent Fuel Pool (SFP) via the Fuel Pool Cooling Line (FPC)
- March 23 around 16:29 Black smoke generated and was confirmed to died down at around 23:30 and 24:04:50.
- March 24 05:35~16:05 Injection of around 120 ton of sea water to SFP via FPC
- March 25 13:28~16:00 Water spray by Kawasaki City Fire Bureau supported by Tokyo Fire Department
- March 25 18:02 Started fresh water injection to the core.
- March 27 12:34~14:36 Water spray by Concrete Pump Truck
- March 28 17:40~31:39 around 8:40 Transferring the water from the Condensate Storage Tank (CST) to the Surge Tank of Suppression Pool Water (SPT)
- March 28 20:30 Switched to the water injection to the core using a temporary motor-driven pump.
- April 3 12:18 The power supply to the temporary motor-driven pump was switched from the temporary power supply to the external power supply.
- April 11 around 17:16 Loss of external power supply of Unit 1 and 2 due to an earthquake occurred (at Hamadori in Fukushima Prefecture) and water injection to the Reactor Core was suspended.
- April 11 18:04 External power supply of Units 1 and 2 recovered (April 11th 17:56). Resumed injecting water to the Reactor Core.
- April 17 11:30~14:00 Confirmed the situation in the reactor building using unmanned robot.
- April 18 12:38~13:05 Stopped the water injection into the reactor core to replace the current hose with a new one.
- April 19 10:23 Completed the work of strengthening connection of the power supplies between Units 1-2 and Units 3-4.
- April 22 13:40~14:00 Tentatively Injected freshwater to SFP via the Fuel Pool Coolant Purification Line.
- April 25 10:57~18:25 For reinforcement work of the power supply, the power supply to the pump injecting water into the reactor core was temporarily switched from the external power supply to the temporary diesel generator.
- April 30 11:34 Completed reinforcement work of the power supply both Units 3, 4. (Increasing the voltage from 6.6kv to 66kv)
### Major Events after the Earthquake 2/3

<table>
<thead>
<tr>

<td>10:07</td>
<td>The amount of water injection into the reactor was changed from about 9.5m³/h to about 9.0m³/h.</td>
</tr>
<tr>
<td>June 24</td>
<td>10:31 ~ 12:42</td>
<td>A radiation dose survey was carried out by a robot in the reactor building.</td>
</tr>
</tbody>
</table>
Major Events after the Earthquake 3/3

- Water spray over the Spent Fuel Pool by Concrete Pump Truck (Fresh water)
  - March 29 14:17～18:18, March 31 16:30～19:33, April 2 09:52～12:54, April 4 17:03～19:19, April 7 06:53 ～08:53, April 8 17:06～20:00, April 10 17:15～19:15, April 12 16:26～17:16, April 14 15:56～16:32, April 18 14:17～15:02, April 22 14:19～15:40, April 26 12:25～14:02

- Fresh water injection to SFP via FPC (using the temporary motor-driven pump)
  - May 8 12:10 ～14:10, May 9 12:14 ～15:00 (12:39 ～14:36 Hydrazine was also injected), May 16 15:00～18:32 (15:10 ～17:30 Hydrazine was also injected), May 24 10:15～13:35 (10:20 ～12:56 Hydrazine was also injected), May 28 13:28～15:08(13:42 ～14:40 Hydrazine was also injected), June 1 14:34～15:54(14:41 ～15:26 Hydrazine was also injected), June 5 13:08～15:14(13:14～14:16 Hydrazine was also injected), June 9 13:42～15:31 (13:45～14:40 Hydrazine was also injected), June 13 10:09～11:48 (10:13～11:36 Hydrazine was also injected), June 17 10:19～11:57 (10:23～11:31 Hydrazine was also injected)
Conditions of Fukushima Dai-ichi Nuclear Power Station  **Unit 4**  
(As of 12:00 June 25, 2011)

**External Power**

- Two lines secured

**EDG**

- Power supply vehicle, Temporary DGs

**RHRS**

- No heat removal is necessary as no fuel is in RPV

**Spent Fuel Pool Cooling System**

- In periodic inspection outage when the earthquake occurred
- March 14 04:08 Water temperature in the Spent Fuel Pool (SFP), 84°C
- March 15 06:14 Confirmed the partial damage of wall in the 4th floor.
- March 15 09:38 Fire occurred in the 3rd floor. (12:25 extinguished)
- March 16 05:45 Fire occurred. TEPCO couldn’t confirm any fire on the ground. (06:15)
- March 20 08:21～09:40 Water spray over SFP by Self-Defense Force
- March 20 around 18:30～19:46 Water spray over SFP by Self-Defense Force
- March 21 06:37～08:41 Water spray over SFP by Self-Defense Force
- March 21 around 15:00 Work for laying cable to Power Center was completed.
- March 22 10:35 Power Center received electricity.
- March 25 06:05～10:20 Sea water injection to SFP via the Fuel Pool Cooling Line (FPC)
- March 29 11:50 Lighting in the Central Control Room was recovered.
- April 11 around 17:16 An earthquake occurred (at Hamadori in Fukushima Prefecture).
- April 19 10:23 Completed the work of strengthening connection of the power supplies between Units 1-2 and Units 3-4.
- April 22 Measured the water level of SFP by a gauge hung on Concrete Pump Truck (62m class).
- April 30 11:34 Completed reinforcement work of the power supply both Units 3, 4. (Increasing the voltage from 6.6kv to 66kv)
- May 9 Started installation work of the supporting structure for the floor of SFP
- June 10 around 14:00～(about 30 minutes) Workers entered the RB and conducted a survey of working environment for the construction work on the SFP circulating cooling system.

**Spent Fuel Pool Water Temperature**  86～88°C  
*Described temporary thermo-couple readings (As of 16:50 June 22)

**No fuel inside the Reactor Core**

**Spraying freshwater by Concrete Pump Truck**

**Major Events after the Earthquake 1/2**

- No fuel is in RPV
- Fresh water is being injected to the Spent Fuel Pool.

Conditions of Fukushima Dai-ichi Nuclear Power Station Unit 5
(As of 12:00 June 25, 2011)

Water Temperature in the Pool: 33.0°C
Condition: Recovery of heat removal function

Reactor Pressure: 0.111 MPa*
Reactor Water Level: 1,657 mm
Reactor Water Temperature: 40.2°C
Condition: Pressure is under control.
*converted to absolute pressure

Water Temperature in the Pool: 33.0°C
Condition: Recovery of heat removal function

In periodic inspection outage

Major Events after the Earthquake

March 20 14:30 Cold shutdown
March 21 11:36 Receiving electricity from external power supply
March 23 17:24 Pump for Residual Heat Removal Seawater System (RHRS) was automatically stopped when the power supply was switched from the temporary to the permanent.
March 24 16:14 Repair of the RHRS pump was completed.
March 24 16:35 Started to cooling.
April 4 21:00  12:14 Discharged the groundwater with low-level radioactivity in the Sub Drain Pit to the sea (around 950 ton).
April 25 12:22  16:43 For reinforcement work of the power supply, the pump for Residual Heat Removal (RHR) was temporarily stopped.
April 25 14:44  17:38 Implemented reinforcement work of the power supply (connection of the power supplies between Units 1-2 and Units 5-6).
May 2nd 13:30  15:03 The pump for RHR was temporarily shut off in order to test the Start-up Transformer for power reception.
May 28 around 21:14 Confirmed shutdown of the RHRS pump
May 29 08:12 Started to replace with the temporary RHRS Spare Pump
May 29 12:31 Started the RHRS Pump
May 29 12:49 Started to cool the Reactor Core by RHR
June 8 8:46  12:35 RHRS pump etc were temporary stopped due to the installation of one more pump for RHRS.
June 24 16:35 Cooling of the Spent Fuel Pool was started using the Fuel Pool Cooling and Clean-up System.

(Editorial committee for Nuclear Energy Handbook, Nuclear Energy Handbook)
Conditions of Fukushima Dai-ichi Nuclear Power Station Unit 6
(As of 12:00 June25, 2011)

Water Temperature in the Pool: 32.5°C
Condition: Recovery of heat removal function.

Removing heat alternately from the water in the reactor and in the spent fuel pool.

Spent Fuel Pool Cooling System

Reactor Pressure
Vessel Temperature: Monitoring by Reactor Water Temperature

 Reactor Pressure: 0.130MPa*
Reactor Water Level: 2,632mm
Reactor Water Temperature: 42.3°C
Condition: Pressure is under control.
*converted to absolute pressure

In periodic inspection outage

March 20 19:27 Cold shutdown
March 22 19:17 Receiving electricity from external power supply
April 4 21:00~April 9 18:52 Discharged the groundwater with low-level radioactivity in the Sub Drain Pit to the sea (around 373 ton).
April 19 11:00~15:00 Transferred accumulated water under the base of the turbine building to the condenser for measuring the amount of it.
April 20 9:51~15:56 The pump for Residual Heat Removal (RHR) was temporarily stopped in order to change the position of the hose of the temporary RHR Seawater System.
April 25 14:44~17:38 Implemented reinforcement work of the power supply (connection of the power supplies between Units 1-2 and Units 5-6).
May 2 11:03~14:53 The pump for RHR was temporarily shut off in order to test the Start-up Transformer for power reception.
