Electricity Supply-Demand Measures this Winter (Outline)

November 2, 2012
Electricity Supply-Demand Review Committee
Energy and Environment Council
1. Electricity Supply and Demand Outlook for this Winter

(i) Under the assumption that this winter will be an extremely cold one, it is expected that a reserve margin of 3%, which is deemed necessary to respond to instantaneous fluctuations in demand, can be secured in all service areas.

(ii) Also in the service areas of Hokkaido Electric Power Co., Inc. (HEPCO), a reserve margin of 5.8% is expected to be secured. However, due to the limits of HEPCO’s ability of power interchange with other power utility companies, special measures should be taken in preparation for the risk of power supply failure.

### Outlook for this winter (incorporating the actual decline this summer in the reasonably anticipated reduction in power consumption and presuming that this winter will be as severe as in FY2011)*

* For HEPCO service areas, as severe as the especially severe winter in FY2010

#### January

Supply capacity of Kyushu Electric Power Co., Inc. includes power interchange from other power utility companies (Chubu and Chugoku).

2. Electricity Supply and Demand Measures for this Winter

(i) General power conservation without concrete numerical targets is to be requested nationwide (excluding the service areas of Okinawa Electric Power Co., Inc.), and the government will present its reasonably anticipated reduction amount as the reference criteria for encouraging consumers to certainly save power consumption.

(ii) For the service areas of HEPCO, multiplexed measures should be taken, such as requesting power conservation with a numerical target (reduction of 7% or more), in order to prevent any power failures, including rolling blackouts.

(1) Request for power conservation with a numerical target (compared to FY2010)

-7% or more*
Dec. 10 – Dec. 28 (16:00 – 21:00)
Jan. 7 – Mar. 1 (8:00 – 21:00)
Mar. 4 – Mar. 8 (16:00 – 21:00)
The above period excludes weekends, holidays, and year-end and new year holidays

*Due consideration should be given to vulnerable people, such as the elderly and those in earthquake-damaged areas, as well as to ensuring functions of lifelines, such as hospitals and railways. Furthermore, effects on production activities (including farming and tourism) should also be taken into consideration. A reduction of 7% or more will be requested when the power supply becomes tight.

In preparation for the possibility of power supply failure equal to or exceeding the largest-ever level

(2) Program for Emergency Adjustments to Prevent Rolling Blackouts (Appendix)
If a 0.33 million kW reduction of power demand can be ensured effectively, power supply-demand will be stable even in the event of power supply failure equal to the largest-ever level (-1.37 million kW).

(3) Bidding for Negawatts during emergencies, etc.
Response to any risks larger than the above

If any power failures, including rolling blackouts occur in Hokkaido during severe winter weather, it may pose a direct danger to the lives and safety of Hokkaido residents, and any possibility of rolling blackouts may itself have a negative influence on tourism and other economic activities in Hokkaido. Through taking the abovementioned spectrum of measures, full preparation should be made for power supply failure equal to or exceeding the largest-ever level in order to prevent any power failures, including rolling blackouts.
(Appendix) Program for Emergency Adjustments to Prevent Rolling Blackouts

(i) If any power failures, including rolling blackouts occur in Hokkaido during severe winter weather, it may pose a direct danger to the lives and safety of Hokkaido residents, and any possibility of rolling blackouts may itself have a negative influence on tourism and other economic activities in Hokkaido.

(ii) Therefore, in preparation even for less frequent risks, the Program for Emergency Adjustments to Prevent Rolling Blackouts should be prepared in order to avoid power failures, including rolling blackouts.

(iii) The national government, the Hokkaido prefectural government, and HEPCO should request that large consumers in HEPCO service areas conclude contracts to join the Program for Emergency Adjustments to Prevent Rolling Blackouts.

Program content

1. Outline
   In order to prevent rolling blackouts that may pose a danger to people’s lives, HEPCO requests a significant reduction of demand by way of temporary suspension of production and economic activities or temporary closing of business, etc. in case of a less frequent emergency due to such causes as a large-scale shutdown of power plants.

2. Coverage
   Large consumers (whose contract power consumption is 500kW or more for industry or business use)
   *HEPCO will visit all relevant consumers (around 1,100) to ask for cooperation

3. Period
   From December 10, 2012 to March 22, 2013 (all day)

4. Goal
   To ensure that demand is reduced by at least 0.33 million kW on effective basis

Scheme

- Request for cooperation from the national government, the prefectural government and HEPCO
- Contract between cooperative companies and HEPCO
  (In a less frequent emergency)
  - Power supply becomes tight (presuming the reserve margin of 1%)
  - HEPCO requests companies to reduce power demand
    *Separately request general households, etc. to refrain from unnecessary power use
    - Companies reduce power demand
    - Discount of electricity rates
